*Nuclear Reactions in Heavy Elements* Feb 04 2021 Nuclear Reactions in Heavy Elements: A Data Handbook focuses on the physical constants of the elements, the properties of isotopes, and data on radioactive decay. This book examines the methods for obtaining heavy elements.

Organized into two parts encompassing nine chapters, this book begins with an overview of data on neutron cross-sections. This text then provides salient information on cross-sections of photo-reactions and of interactions of charged particles with nuclei. Other chapters consider some general characteristics of the fission process as well as the basic characteristics of spontaneous fission of heavy metals. This book discusses as well the basic characteristics of binary fission of heavy nuclei, including the energies and yields of fission elements, their distribution with regard to mass, and the range of fragments. The final chapter deals with data on various kinds of radiation accompanying the fission process. This book is a valuable resource for physicists and research workers.

**Product Focused Software Process Improvement** Aug 18 2019 On behalf of the PROFES organizing committee we are proud to present to you the proceedings of the 5th International Conference on Product

Focused Software Process Improvement (PROFES 2004), held in Kansai Science City, Japan. Since 1999, PROFES has established itself as one of the recognized international process improvement conferences. In 2004 the conference left Europe for the first time and moved to Japan. Japan and its neighboring countries are intensifying their efforts to improve software engineering excellence, so it was a logical step to select Japan as the venue for PROFES 2004. The purpose of the conference is to bring to light the most recent findings and results in the area and to stimulate discussion between researchers, experienced professionals, and technology providers. The large number of participants coming from industry confirms that the conference provides a variety of up-to-date topics and tackles industry problems. The main theme of PROFES is professional software process improvement (SPI) motivated by product and service quality needs. SPI is facilitated by software process assessment, software measurement, process modeling, and technology transfer. It has become a practical tool for quality software engineering and management. The conference addresses both the solutions found in practice and the relevant research results from academia. This is reflected in the 41 full papers, which are a balanced mix of academic papers as well as industrial experience reports.

American Education and the Demography of the US Student Population.

1880 - 2014 Feb 22 2020 This monograph examines changes in the American public school population from 1900 to 2010. It shows how different historical periods have affected the composition of the student body and have posed important challenges to those involved in shaping educational policy. The author first develops an analytical framework that merges education and applied demography concepts. The education concepts include attendance, promotion, retention, high school graduation, and college enrollment. While, the applied demography concepts take into account size, distribution, and composition. He then applies this framework to the four most recent American historical periods: the Progressive Era, the Great Depression, the Post WWII Era, and the Post 1983 Era. Readers will come to understand the changing socio-demographic profile of American schools due to such factors as immigration from Europe, child labor laws, internal migration, greater fertility and the rise of the Baby Boom generation, the changing status of women and minorities, the urban crises, rising social inequality, the 2008 recession, and globalization. Featuring both historical and current data, this volume clearly shows how demographic change affects the teaching and learning environment, education policy, funding, and school segregation. Overall, it offers insightful analysis that may help shape the future of American education.
